

2019 PIOP District Partner Meeting

Out with the Old
In with the New
What do we do?

iPads iOS 9 - aged out devices.....

Full time photo frame- **use slide show for visual schedule**

- Visual schedule- first then-
 - Open photo app- tap + -create new album- recess
 - select photos from camera roll – add to new album
 - Tap slide show

Adjust how slide show plays with the *options* on bottom right corner

Dedicated music player – just pair with a Bluetooth speaker

Dedicated e-book reader- social stories, save a pdf

iOS 9 still has the best visual timer

What's new!!!

Accessibility features - That would be a entire day to look at all of the new items.

Invert colours– not new – smart invert and classic invert

How to Invert Colours on the iPhone and iPad

To invert colours on an iPhone or iPad running iOS 11 or higher, follow these steps:

Tap **Settings**.

Tap **General**.

Tap **Accessibility**.

Tap **Display Accommodations**.

Tap **Invert Colors**.

At this screen, you have two options: **Smart Invert** and **Classic Invert**. Both reverse the colours of the display. *Smart Invert* is a bit more subtle, though, because it doesn't invert all colours. It leaves some colours, such as those in images, media, and some apps, in their original colours. *Classic Invert* simply inverts everything.

How to Quickly Turn Dark Mode On and Off

If you want to use Dark Mode regularly, you probably will want something faster than 7 taps to enable it. Luckily, you can do that by turning on the built-in Accessibility Shortcut, which includes color inversion. Here's how:

Tap **Settings**.

Tap **General**.

Tap **Accessibility**.

Scroll to the bottom and tap **Accessibility Shortcut**.

On this screen, you can choose what accessibility features are available in the shortcut. Tap each option you want – including **Smart Invert Colors**, **Classic Invert Colors**, or both – and then leave the screen.

Now, whenever you want to invert colors, triple-click [the Home button](#) and a menu pops up from the bottom of the screen containing the options you selected.

Tap an option to invert colors and then tap **Enable**.

Lifewire handout.

iPad screen as switch to take a photo

Add a new switch

External: Choose a Bluetooth switch.

Screen: Tap the screen to use a switch or press and hold.

Camera: Move your head to use the iPhone front-facing camera as a switch.

You can use the camera as two switches: One when you move your head to the left, and the other when you move your head to the right.

Add a switch and choose its action:

Go to Settings > General > Accessibility > Switch Control > Switches.
